ITMD 413 HW 11  
Learning Report Summary

1. Yes the assignment was successfully completed and it produces the correct output with no errors. All of the graphs come out properly.
2. I spent about 2 days completing the assignment.
3. The assignment was challenging because I could not get the datasets built into Seaborn to load.
4. I wrote the program myself.
5. I consulted the documentation and Stack Overflow when I encountered issues.
6. I learned how to debug much more and how to use Seaborn.
7. For this assignment in the future include the GitHub page that contains complete data sets and data set names:  
<https://github.com/mwaskom/seaborn-data>  
This will make loading the datasets and working with them easier, rather than using the attached data files, which are incomplete and harder to work with (you cannot use `sns.load_dataset()` with the file names from the .csv files attached to the assignment. The file names are listed on the GitHub).
